

A bird of prey, possibly a Crested Eagle, is perched on a thin, light-colored branch. Its wings are spread wide, showing a mix of brown and orange feathers. The bird has a distinctive crest of long, thin, orange-brown feathers that fan out from its head. Its face is blue with a red eye, and its beak is dark. The background is a soft, out-of-focus green, suggesting a forest or jungle setting.

NORTH PERU TOUR ITINERARY

2 to 25 SEPTEMBER 2027
**TOUR STARTS AT TARAPOTO
AND ENDS AT CHICLAYO**

PRE-TOUR to PLATAFORMA (Optional)

THURSDAY 2 SEPTEMBER - ARRIVE IN TARAPOTO

There are several flights a day from Lima, note that internal flights are not included in the price, but this is the only air route needed. Some birding or culture can be arranged for those arriving early. o/n Tucan Suites Hotel. Baggage can be left here.

FRIDAY 3 SEPTEMBER - TARAPOTO TO PLATAFORMA VIA BELLAVISTA

Travel up to Plataforma, southwards from Tarapoto to Bellavista, then a rough road south- eastwards. This road, though unsealed, has greatly improved over the last few years. O/n at a basic hotel for 2 nights.

SATURDAY 4 SEPTEMBER- PLATAFORMA

All day birding in the surrounds of the village, part of the Cordillera Azul National Park, a high ridge of forest habitat. Target species are (1) the Scarlet-banded Barbet, discovered in 1996 and endemic to humid highland forest on a ridgetop known as Peak 1538, and (2) Cerro Azul Antbird discovered in 2016 in the vicinity of Flor de Café. Other high quality species< should be expected. 2nd night at the hotel.

Sunday 5 September – Return to Tarapoto, retrieve any baggage & transfer to Pumarinri.

Scarlet-banded barbet
Capito wallacei
